

Vulnerability Analysis

Vulnerability analysis at the [CERT Coordination Center \(CERT/CC\)](#) consists of a variety of efforts, with primary focus on coordinating vulnerability disclosure and developing vulnerability discovery tools and techniques. Publicly available resources include:

- Public vulnerability information: [Vulnerability Notes](#) and [vulnerability data archive](#)
- [Coordination and disclosure guidance for security researchers and vendors](#)
- [The CERT Guide to Coordinated Vulnerability Disclosure](#) in its entirety
- [Vulnerability Disclosure Policy Templates](#) for use in creating your own customized disclosure policy
- [Vulnerability Reporting Form](#) (please be familiar with the [guidelines](#) before reporting)
- Open-source vulnerability discovery and analysis [tools](#)
 - [CERT BFF - Basic Fuzzing Framework](#) — The CERT Basic Fuzzing Framework (BFF) is a software testing tool that finds defects in applications that run on the Linux and Mac OS X platforms. BFF performs mutational fuzzing on software that consumes file input.
 - [CERT FOE - Failure Observation Engine](#) — The CERT Failure Observation Engine (FOE) is a software testing tool that finds defects in applications that run on the Windows platform. FOE performs mutational fuzzing on software that consumes file input.
 - [CERT Tapioca](#) — CERT Tapioca is a network-layer man-in-the-middle (MITM) proxy framework based on mitmproxy <http://mitmproxy.org/>. CERT Tapioca is installable on Red Hat Enterprise Linux, CentOS, Fedora, Ubuntu, OpenSUSE, and Raspbian.
 - [CERT Triage Tools](#) — The CERT Triage Tools project has been transitioned to the GDB 'exploitable' plugin <https://github.com/jfoote/exploitable> project on GitHub.
 - [CERT Vulnerability Data Archive and Tools](#) — The CERT Vulnerability Data Archive contains nearly all of the non-sensitive vulnerability data collected by the CERT/CC, from the inception of the vulnerability notes database (approximately May 1998) to the date the archive was prepared, as noted above in the Change Log.
 - [Dranzer](#) — Dranzer is a tool that enables users to examine effective techniques for fuzz testing ActiveX controls.
